

## TheBrain 10 Release History

---

TheBrain 10 is a free upgrade with a Pro Services subscription and for purchases made after July 17th, 2018.

Note: The stable update channel is recommended for most users and will avoid frequent updates. The alpha channel receives all updates and provides access to the most recent builds. However, builds on the alpha channel may include unexpected issues occasionally. The beta channel is in between the alpha and stable channels. Set the update channel via Preferences > System.

### Version 10.0.36

January 21, 2019

- New Features
  - (#5330) Prevent import of a folder that contains the backend data for a Brain (including v8/9/10 data)
- Fixes
  - (#5331) Import error while importing subfolder from a v8 brain

### Version 10.0.35

January 18, 2019

- Fixes
  - (#5327) Import fails with OutOfMemoryException

### Version 10.0.34

January 15, 2019

- New Features
  - (#5266) Show user email address on right-click from Brain Access dialog
- Fixes
  - (#5312) Deleting multiple new Thoughts new a row can cause error
  - (#5313) Windows: Menu item separator appearance is incorrect
  - (#5320) Import of a Brain with hundreds of thousands of attachments fails
  - (#5322) Improve reliability of concurrent access to cache objects

### Version 10.0.32

January 7, 2019

- Fixes
  - (#5307) macOS: Cannot use keyboard to navigate after searching
  - (#5314) Content area sometimes has empty space when attachments are shown as tabs
  - (#5316) macOS: Increase maximum displayed attachment search results
  - (#5317) macOS: Previewing an external PDF results in a crashing error
  - (#5318) Import of v8 Brain may fail - update to new version of the H2 database

### Version 10.0.31

December 27, 2018

- Fixes
  - (#5230) Attachments not shown when "Attachments as a List" is selected and the plex is displayed on top
  - (#5293) Switching accounts while on the BrainBox tab causes an error
  - (#5310) Error during sync or import of some Brains: Specified method is not supported

### Version 10.0.30

November 30, 2018

- Fixes
  - (#5215) Windows: In dark mode, text files are all black when previewed as attachments
  - (#5285) Duplicate field instances on a single source can cause errors
  - (#5287) Error occurs when marking a Thought as private and private thoughts are hidden
  - (#5289) Error occurs when back/forward buttons attempt to activate a private thought and private thoughts are hidden

### Version 10.0.29

November 28, 2018

- New Features
  - (#4716) Option to disable automatic checking for updates at startup
- Fixes
  - (#5200) macOS Mojave: Some text at the end of preferences checkboxes is truncated
  - (#5213) Enable launch of web page to initiate manual update process when applicable
  - (#5269) If not qualified for a free upgrade, inform of paid upgrade when applicable
  - (#5271) macOS: UI issues when Mojave Dark Mode is enabled and Light theme is selected in TheBrain
  - (#5272) Improved formatting for update notifications
  - (#5278) Server communication failure when connecting from some locales (HMAC failure)

### Version 10.0.27

November 21, 2018

- New Features
  - (#5263) Button on Thought properties dialog to switch name and label
- Fixes
  - (#5260) macOS: Drag and drop from internal web browser causes error
  - (#5267) Error on startup when using free edition

### Version 10.0.26

November 13, 2018

- Fixes
  - (#5237) Windows: When compact title bar is enabled, pins cannot be clicked in presentation mode
  - (#5246) Plex ignores mouse events (caused by invisible reminder window)
  - (#5250) macOS: Error when activating Add Attachment tab

### Version 10.0.25

November 1, 2018

- Fixes
  - (#5237) Windows: When compact title bar is enabled, pins cannot be clicked in presentation mode
  - (#5239) When Windows fails to create a shortcut, the folder export process fails
  - (#5240) "instanceOf" link to a thought that is not a type causes an error
  - (#5241) Error when ending icon hover
  - (#5242) macOS: Error on drag and drop to dock icon when no brain window is open
  - (#5243) Error when attempting to display unlink command
  - (#5244) Clicking a local brain URL from a 3rd party application when no brain windows are open leads to error
  - (#5245) Error when showing attachment context menu

### Version 10.0.24

October 31, 2018

- New Features
  - (#5183) Make display of type as a parent of instances optional on a per type basis
    - Right click on a type to toggle this setting
- Fixes
  - (#5231) Multiple Attachment records for the same internal file cause folder export to fail
  - (#5232) Default update channel should be "stable"
  - (#5233) When exporting, the destination folder should be detected as empty even if it has system files in it
  - (#5234) Splitter controls do not allow resizing some areas to their minimal size

### Version 10.0.23 (Official Release)

October 29, 2018

- Fixes
  - (#5068) Error encountered when checking for changes if not connected
  - (#5227) Failure to lookup search result name results in error

### Version 10.0.22 (RC)

October 27, 2018

- New Features
  - (#5222) Improved performance when searching external attachments
  - (#5224) macOS: Improved UI responsiveness
- Fixes
  - (#2922) Plex: keyboard nav reticle animation is sometimes choppy
  - (#5223) If invalid paths exist, the sync process should inform the user prior to starting negotiation with the server
  - (#5225) Types and tags toolbar buttons should enable creation of new items even if there are none existing

### Version 10.0.21 (RC)

October 26, 2018

- New Features
  - (#5218) Faster brain initialization, especially for 100K+ thought brains
- Fixes
  - (#5187) Link Properties: "Untyped" button should be "Type"
  - (#5188) Link context menu text adjustment
  - (#5198) Linking an existing thought via search from a non-active thought does not update the display
  - (#5214) macOS: Image load error on display of brains list
  - (#5217) Move "Open BrainBox" button to the bottom of the brains list
  - (#5219) Windows: Restored window location is inaccurate when compact title bar is enabled
  - (#5220) Windows: Drag and drop of tabs when compact title bar is on does not give accurate visual feedback

### Version 10.0.20 (RC)

October 24, 2018

- Fixes
  - (#4935) Windows: Copy internal files and paste to another application not working
  - (#5033) macOS: Brain tabs are not restored after quitting
  - (#5103) Default endpoint connects no longer connect to the stagingapi
  - (#5155) Create thought from search button not working
  - (#5184) macOS: Ctrl+click should function like right-click on Brain Access Dialog
  - (#5189) Desktop BrainBox should be properly sorted with newest items at the top
  - (#5190) TeamBrain: Disable brain and show message if concurrent user license is exceeded
  - (#5191) TeamBrain: Read-only users should only be assigned reader access to a brain (via Brain Access Dialog)
  - (#5192) TeamBrain: Read-only users should not be able to create or modify any brains
  - (#5203) TeamBrain: Account status tracking is creating a new session on every request
  - (#5205) Remove number of items in BrainBox from brain select tab
  - (#5207) TeamBrain: Edit Brain Access Dialog: Right click on user to change access level does not work
  - (#5208) TeamBrain: Edit Brain Access Dialog: Invite by email should not be available for enterprise deployments
  - (#5209) TeamBrain: Edit Brain Access Dialog: Can't set access level for other users above reader

### Version 10.0.17 (Beta)

October 9, 2018

- Fixes
  - (#4616) macOS: Double click to open .BrainTheme does not work
  - (#5074) Update on hover sets size of attachments list area incorrectly after unhovering
  - (#5114) Internal folder is called "Inbox" instead of "BrainBox"
  - (#5115) Tag context menu does not restore the action item back to the active thought
  - (#5171) Link to existing Thought in conjunction with semicolons not working
  - (#5175) When the content area is opened in a new window, sometimes the reports area is shown

- (#5176) Pins do not import from version 8 if the originating file has a "&" in the name
- (#5179) Sync status may be inaccurate due to use of ESRs

### Version 10.0.16 (Beta, macOS Only)

October 4, 2018

- Fixes
  - (#5050) macOS: Various dark mode problems
  - (#5150) macOS: PDF Preview is blank
  - (#5156) macOS Mojave: Dialogs or parts of dialogs are sometimes invisible

### Version 10.0.14 (Beta)

September 28, 2018

- Fixes
  - (#5009) Thought icons that are gif files in v8 are lost when imported to v10
  - (#5071) Thoughts created from the search box do not get labels added
  - (#5083) Sometimes attachment/note search results do not show at all
  - (#5145) In rare cases, commands are executed directly when they should be disabled, causing errors
  - (#5146) Error updating BrainBox list in response to HandleDataChanged
  - (#5147) Creating a brain when no window is open results in error
  - (#5148) Add attachment tab causes error if the user is not logged in
  - (#5149) Getting menu tooltip fails during creation of thought context menu
  - (#5153) Resume of a sync that was pending and not started never resumes

### Version 10.0.13 (Beta)

September 27, 2018

- New Features
  - (#5117) Windows: Option to disable compact window title (increases performance for some graphics cards)
- Fixes
  - (#5119) BrainBox sometimes refuses to sync
  - (#5120) macOS: Preferences dialog does not open
  - (#5121) Update of BrainBox prior to being displayed causes error
  - (#5122) Windows: Drag and drop from BrainBox causes error
  - (#5123) Windows: Preferences dialog error related to default note type if local only user
  - (#5124) Windows: Send to from File Explorer sometimes causes error
  - (#5125) Windows: Drag and drop from attachment tab causes error
  - (#5126) Thought context menu for causes error getting title of Open Folder Command
  - (#5127) Opening an attachment from BrainBox sometimes causes error
  - (#5128) SimpleWebWrapper error getting content
  - (#5129) Notes toolbar button error
  - (#5143) Windows: Drag and drop of a file from BrainBox fails to add the file to the Brain

### Version 10.0.11 (Beta)

September 25, 2018

- New Features
  - (#699) BrainBox
    - BrainBox is always available as long as you are logged in
    - BrainBox can be added to via
      - Web browser extension/bookmarklet
      - Windows Explorer integration
      - macOS drag and drop to TheBrain icon in the dock
    - BrainBox requires an active Pro services subscription
  - (#1926) macOS: Drop of file onto dock icon to add dropped item to BrainBox
  - (#3321) Keyboard shortcut for "Switch Name and Label Text"
  - (#4952) Export brain data command. Formats: Folders, Text outline, and JSON
  - (#4999) Command to switch note between single line break and paragraph break

- (#5034) Expand/collapse hovered thought using Spacebar, like when using keyboard navigation but using the mouse to indicate the thought to toggle
- (#5037) Context menu for tags on thoughts
- (#5047) Command to replace a tag with another tag
- (#5048) Alt+Click on a tag icon to edit its properties
- (#5081) Windows: Enable more space by combining the title bar and menu bar into one row
- (#5100) Windows: Right click on a file in File Explorer > Send to > TheBrain BrainBox
- (#5113) BrainBox: Previews of images, PDFs, text files, etcetera should be shown in the BrainBox tab just like they are for normal attachments
- Fixes
  - (#1925) Mac: Drag and drop of .brz and .brainzip to Dock icon
  - (#5013) When changing brain storage location, system folders and files should be ignored for the purpose of detecting an empty directories
  - (#5020) Tips unreadable in Dark Mode
  - (#5030) macOS: Buttons on upgrade and about dialog are not readable when in dark mode
  - (#5033) macOS: Cmd+Q does not preserve Brain layout settings
  - (#5039) Windows 7: Types and tags menus are not left aligned, making the hierarchy impossible to discern
  - (#5040) Preferences > Behavior > Toggle Commands causes error
  - (#5041) Removing reminder from a dismissed event causes a crash
  - (#5046) Change icon via tag context menu sets icon for active thought instead
  - (#5058) Error when syncing: Access to Windows temp directory is denied (sporadic)
  - (#5072) Sometimes a search result that is found in Windows search does not show in TB's search results
  - (#5075) External attachments not found in search when Outlook is indexed
  - (#5080) Windows: When entering presentation mode if the window is already maximized, the task bar is not covered
  - (#5086) Logged in with ALL my accounts after update to 10.0.8
  - (#5090) BrainBox tooltips are missing
  - (#5092) Closing the BrainBox tab should not close window
  - (#5095) BrainBox: Hamburger button displays "Localization ? Command..."
  - (#5097) Some commands appear twice in keyboard shortcuts list
  - (#5099) Some notifications that should appear on the brain selection tab are not appearing
  - (#5102) BrainBox should update automatically when displayed
  - (#5104) BrainBox should sync immediately when a file is added via (1) Window Explorer > Send to or (2) macOS drag and drop on dock icon
  - (#5106) Keyboard shortcut description for Move from BrainBox is too long
  - (#5107) Windows: BrainBox display improvement for Explorer
  - (#5108) Windows: Explorer > Send to does not work if there is a space in the path
  - (#5109) BrainBox Tab: When an item is deleted it is still shown in the content window

## Version 10.0.6 (Alpha)

August 29, 2018

- New Features
  - (#4985) Attach event to an arbitrary thought, not just the active thought
  - (#4990) Allow user to override placing brains root folder on a network path
- Fixes
  - (#4975) macOS: Pressing Esc doesn't exit full screen
  - (#4984) Editing a note does not prevent auto sync if word count is disabled
  - (#4986) When selecting a thought to insert into notes or add to an event and no thought is found a previous result may be used instead
  - (#4987) macOS: Changing a preference that causes a restart results in an Apple error message
  - (#4988) Context-sensitive naming combined with hidden ordering prefix results in inaccurate thought width (trailing space)
  - (#4989) Changing images in the plex does not work until brain is closed and re-opened (icons/wallpaper)
  - (#4991) Windows: Find and Replace crashes when no location is selected
  - (#4992) Default keyboard shortcut for Notes > Open in Browser is already used

- (#4994) Link to existing Thought via typing not working for disambiguated Thought names
- (#4995) Some preferences are reset to default values on restart
- (#5000) Dark mode: Notes paragraph style popover should use a dark background
- (#5001) Windows: Thought type/tag context menu width should adjust to fit content
- (#5010) Windows: Occasional exceptions during rendering (SingleCycleCache)
- (#5011) Find and replace should handle errors gracefully

## Version 10.0.5 (Alpha)

August 24, 2018

- New Features

- (#1144) Linkable thought types
- (#1295) Render thought types with colors and icons in menus
- (#1367) Window menu matching macOS and Windows conventions
- (#1368) Tab context menu
- (#1538) Insert Thought Link button in the Notes Editor
- (#1979) Presentation mode (full-screen without: title bar, menu bar, toolbar, brain tabs)
- (#2283) Tag background colors
- (#2765) Keyboard method to open attachment (on thought with multiple attachments)
- (#2914) Performance improvement: Use a cache for tags, similar to types
- (#3179) Ability to search external attachments
- (#3283) Better sizing of text in pins, past thoughts list and selected thoughts
- (#3363) Detect duplicate Thought names when pasting a text outline
- (#3427) Capture Image to Clipboard
- (#3509) Dynamic sizing of attachments list
- (#3631) Visual indicator for tag thoughts
- (#3646) Enable context menu for Type/Tag toolbar popups, search results & reports
- (#3666) Brain-wide find and replace of names, labels, locations
- (#3766) Do not show link labels for "extra" links except on hover
- (#4179) Resizable reports area
- (#4296) Search by Acronym
- (#4386) Link labels on secondary links should be represented by a dot
- (#4547) Create types and tags via the toolbar popups
- (#4560) Search for Thoughts starting with punctuation
- (#4573) Enhanced create/link thought dialog
  - (#1938) Display existing thought matches even when using the semicolon to create multiple thoughts
  - (#4574) Assign tags to existing thoughts as part of the link process
  - (#4575) Link to multiple existing thoughts using semicolon
  - (#4576) Create thoughts and link to existing thoughts at the same time
- (#4653) Customizable thought context menu
- (#4654) Dark mode - render user interface in dark colors
- (#4676) Timeline: Highlight weekends visually
- (#4686) Clickable tags
- (#4689) Distant thoughts: When the space for text is extremely short, don't use an ellipsis
- (#4694) Ability to convert a Thought to a type or a tag or a normal thought via properties dialog actions menu
- (#4703) Show changes to events in thought/link history
- (#4737) Improved link label rendering
- (#4753) Render thought tags with colors and icons in menus
- (#4758) Better looking Thoughts in UI lists (search, reports, tags, types, recent changes, etc)
- (#4767) Improved thought properties dialog layout
- (#4778) Indicate when the thought being edited is a type or tag
- (#4779) Thought properties shows inherited icons and labels
- (#4781) Visually distinct Thought types and tags in search results
- (#4785) Display very dark favicons on a white background
- (#4786) Linkable thought tags
- (#4787) Tags can be applied to types and to other tags
- (#4789) Structured tags

- (#4791) Improved thought rendering with crisp edges
- (#4794) Redesigned Select Related Thoughts function with options to include types and tags
- (#4815) Redesigned visual indicator for type thoughts
- (#4862) Brain Theme Dialog Improvements
- (#4887) Resizable Existing Objects Detected dialog
- (#4922) Optimize performance with focus on rendering preparation
- (#4937) Notes: Preference for Enter to create a single line break instead of a paragraph break
- (#4964) Duplicate Tab command
- Fixes
  - (#3339) It should not be possible to enter a "newline" via Ctrl+Enter on the search box (nor anywhere else).
  - (#3353) Link label is behind other links
  - (#3502) Link stays selected if thought is activated without clicking in the plex
  - (#3988) Windows: Multiple File context menu does not stay active.
  - (#4198) Long tag names do not display in drop down menus
  - (#4555) Operations on Calendar Events should appear as one action in "Undo"
  - (#4559) Refreshing the Content View can cause a crash
  - (#4568) macOS: When dark mode is enabled and you exit fullscreen mode, the native OS title bar appears
  - (#4572) Link Types - directional setting can be lost when editing the link directly
  - (#4594) Clicking a private thought while they are filtered causes error
  - (#4595) Private thoughts should be hidden from Recent Changes list when filtering of private thoughts is on
  - (#4652) Tags in toolbar tag navigation popup should not be checkable
  - (#4696) Link labels are too big when highlighted
  - (#4745) Right click on icon in TPD should show the icon commands
  - (#4780) Spaces added to thought name with a comma in a number
  - (#4788) Changing a thought type's supertype via drag and drop from child to sibling does not work
  - (#4790) It is possible to create cyclic type and tag trees by converting a thought kind from normal to type/tag
  - (#4803) Increased responsiveness when activating Thoughts
  - (#4805) Multiple commas in a row and commas at the start/end should be ignored
  - (#4811) Orphan thought report should include thoughts that have tags
  - (#4812) Parentless thought report should include thoughts that have tags
  - (#4813) Parentless and orphan reports should not include typed thoughts
  - (#4822) Outline view collapse all button does not work sometimes
  - (#4836) Prevent crash when access to a file is denied
  - (#4845) Duplicate code for handling of normal dialogs and popup dialogs needs to be consolidated
  - (#4865) Parentless thought report should include pinned thoughts
  - (#4886) Import of text outline should detect duplicate Thought names
  - (#4888) macOS: Existing objects detected dialog header does not line up with table
  - (#4899) FormatException during sync
  - (#4927) Notes CSS is not loading
  - (#4931) App should be called TheBrain 10, not TheBrain 9 (enables side-by-side installation)
  - (#4933) macOS: TheBrainUpdateHelper is 32 bit
  - (#4951) macOS: Dragging a tab out to create a separate window does not work
  - (#4953) Bad thought icon can cause UI code to throw exception
  - (#4954) macOS: Switching tabs and dragging tabs is sluggish when there are many brains
  - (#4980) Windows: Side by side installation of 9 and 10 should be enabled by default
  - (#4981) Windows: Error when closing a non active Brain tab
  - (#4982) Free users cannot sync
