- Moved DIRECTORY constant from BFC to AttachmentsReader

Version 7.1.0.9 – Beta
November 7, 2012
- Fixed: Thoughts sometimes leave multi-line artifacts when in expanded view (#2329)
- Sync
    - When forcing a sync, an ending date can be specified so that changes made within a specific range

can be synced

Version 7.1.0.8 – Beta

October 4, 2012

- More efficient syncs – thoughts are no longer unnecessarily synced when the link between them is modified
- Preferences rearranged – all Brain-specific settings such as colors and wallpaper are now on a single "Brain" tab.
  - Layout improved to be easier to understand and more compact to fit on smaller screens
- More compact custom reports dialog
  - Fits on smaller screens
- Fixed: Copy image from IE and paste wallpaper does not work (#2396)
- Fixed: Email attachment using Apple Mail does not open Mail as the top window (#2400)
- Fixed: Notes window flickers after opening an additional Notes window when using HTML View (#2404)
- Fixed: Link label in the plex is not updated sometimes (#2038)
- Fixed: If window is set to float mode, the docked window position is not saved on quite (#2374)
- Fixed: When copying/pasting Thoughts, the counter erroneously increases continuously (#2386)
- Fixed: Notes indicator displaced (#2109)
- Fixed: Mac Shift+Ctrl+click doesn't show delete option (#2333)
- Fixed: "A sync is already in progress" error shows – do not start an automatic sync if a sync is already in progress
- Fixed: Thoughts selected in the instant activate list are not readable
- Fixed: On Mac OS, Preferences > UI > Destination for Explorer... should not appear (#2440)

Version 7.1.0.7 – Beta

September 17, 2012

- Added progress notification when deleting multiple thoughts
- Calendar events can now be sorted by Event Name, Thought, or Priority and in ascending or descending order
- Default theme is now light blue
- Improved look of link thickness selector
- Fixes
  - Fixed: Messages in the progress notification area overlap when they are long and may not animate properly in some cases
  - Fixed: Event reminders may be delayed by up to 55 seconds in some cases and in rare cases reminders may not show
  - Fixed: When viewing the list of events for a Thought, all columns now behave consistently – double click on an event to edit it
  - Fixed: Various MindManager import problems including imports stopping unexpectedly, URL's not importing correctly, and the "yes to all" option for overwrites not working correctly
  - Fixed: Sometimes large imports of data hang at random times during import
  - Fixed: Importing of outlines which use a "#" to indicate multiple references only work with a single reference
  - Uses a new .ico image loading library

Version 7.1.0.6 – Beta

July 26, 2012

- Added code signing for Mac OS
- Fixed: On Windows, the toolbar buttons do not redraw properly
- Fixed: When deleting a brain the _brain folder is deleted the .brain file is not (#2348)
- Fixed: Dragging certain URLs to the plex can sometime cause the app to being non-responsive
- Fixed: The Thought Types Window closes if you click on an empty area of it and there are no types (#2394)
- Fixed: The color wheel dropdown shows the color of the link's type as being selected instead of the color of the selected link (#2392)
- Fixed: Tags and types should always be at the top of the instant search results (#2405)
- Fixed: Instant search sometimes does not sort tags and types to the top of the list
- Fixed: Wallpaper tiling does not take effect until window is resized (#2408)

- Fixed: Link type selection menu background inconsistent with Light Grey theme (#2393)
- Fixed: Some dialog boxes fit when the screen resolution is shorter than 600 pixels tall (#2328)
- Fixed: Enabling proxy without specifying a port causes failure to start

Version 7.1.0.5 – Beta
July 22, 2012
- Faster startup and display of the main application window
- User Interface Improvements
  - Highlights showing recently created thoughts disappear more quickly
  - Online Brains do not open in the browser on click – the context menu is shown instead
  - The background displayed behind brains is rendered more smoothly
  - Link lines drawn during creation of a thought are also curved
- File > Open Brain opens a list of brains, instead of the file selection dialog.
  - File selection dialog is now available from the "Browse Local Files…" button
- Mac OS X
  - Streamlined toolbar buttons
  - Retina display support
    - Everything in the plex (thought names, icons, images, links, etcetera) is rendered in retina resolution
    - All text is rendered in retina resolution
    - The main toolbar is rendered in retina resolution
- Fixed: After linking to existing, the text in the create thought dialog is not cleared
- Fixed: The initial sync using a BrainZip does not resume if connection is lost and restarts instead
- Fixed: Progress information does not close if pasting of thoughts does not end correctly.
- Fixed: Copy and paste of notes images from one thought to another sometimes does not work
- Fixed: Old images pasted into notes are sometimes not removed from the Thought folder.

Version 7.1.0.3 – Beta
June 21, 2012
- Fixed: Reset accelerators button on Mac resets to non-Mac accelerators

Version 7.1.0.2 – False non-beta
June 6, 2012
- Progress dialog shows on auto-syncs
- Progress dialog text is easier to read

Version 7.1.0.1 – Beta
June 6, 2012
- Distant thought colors can be overridden and set to a single color (#1915)
- Progress dialog animates more smoothly
- Fixed: Instant search getting cleared when first run (#2369)
- Fixed: Invalid characters in attachment filenames prevent Quick Look and possibly other things (#1597)
- Fixed: Create thought dialog loses the name entered when switching between parent/child/jump using the keyboard accelerators
- Fixed: UI issues when setting thought color via hex (#2257)
- Removed unneeded command to download favicons. Missing favicons are attempted to be downloaded on each restart
- Re-enabled downloading of URL title information

Version 7.1.0.0 – Beta
May 10, 2012
- Enhanced multi-threading support
  - Many tasks that previously made the user wait such as copying a large number of files, creating a BrainZip, and other things can proceed in the background
  - The progress for these tasks is shown in the main toolbar, which is shown for the duration of the task if it is hidden

- Manual syncs now also proceed in the background by default and progress for both manual and automatic syncs is shown in the toolbar
- When multiple tasks are happening at once, only the status of the newest task is displayed. If that task finishes before a prior task, the status of the prior task will reappear.
- Calendar and Events
  - Fixed: Event list in reminders popup and on day view is not ordered correctly
  - Fixed: Multi-day events synced from Google Calendar display as being one day shorter
  - Fixed: In certain cases, the first sync of a Brain copied from one machine to another causes deleted items to re-appear
  - Fixed: Various issues with syncing to Google Calendar
- Favicon Management
  - Favicons are now centrally stored and managed so they are only downloaded once
  - Fixed: Some favicons, such as facebook.com do not load
- Fixes
  - Fixed: Exception during indexing of content added to links
  - Fixed: When Thoughts with tags are copied, the tags may appear more than once in the XML
  - Fixed: Multiple confirmations appear on some copy/paste operations
  - Fixed: Download of URL information and icons from yelp.com does not work
  - Logging framework changed
